SUMMARY
Full-stack engineer with five years shipping web products in TypeScript, strongest on the frontend: owned a React design system used by three product teams, built the checkout flow of a payments startup from the first commit, and pairs hands-on engineering with close work with designers and product managers.

EXPERIENCE
Software Engineer, Ledgerly, Lisbon, PT (2023-04 to present)
- Built the merchant checkout flow (React 18, TypeScript, Node.js on PostgreSQL) used by 400+ merchants, taking it from prototype to production in four months with a 99.9% monthly availability target met every quarter since.
- Owned the component library (Radix UI primitives, CSS-variable tokens, light and dark themes) adopted by three product teams, cutting new-screen delivery time from about a week to two days.
- Introduced Playwright end-to-end tests for the five revenue-critical flows and a Vitest suite of 300+ unit tests, which caught two regressions before release in the first quarter.
- Worked directly with two designers and a product manager in weekly discovery sessions, turning customer interviews into shipped features within the same sprint.

Frontend Developer, Brightpath Studio, Remote (EU) (2021-02 to 2023-03)
- Delivered eleven client websites and two web apps in React and Next.js for an agency of eight, including a booking platform handling 2,000 reservations a month.
- Raised Lighthouse performance scores from the 50s to 90+ on the agency's template through code splitting, image optimization and font loading fixes.
- Set up the agency's shared ESLint, Prettier and CI configuration, removing a recurring class of merge conflicts.

Web Developer, Universidade de Lisboa (student job), Lisbon, PT (2019-09 to 2021-01)
- Maintained the faculty's internal course-registration site (PHP, JavaScript, MySQL) and rebuilt its schedule view in React, used by 3,000 students each semester.

PROJECTS
Shelfmate (open-source reading tracker) (2025)
- Built and open-sourced a reading tracker with a Next.js frontend, a Node.js API and PostgreSQL, with OAuth sign-in, offline-first syncing through a service worker, and 120 Vitest tests; 80 GitHub stars.

Lisbon Transit Widget (2024)
- Shipped a macOS menu-bar widget in Electron and TypeScript showing live departures from the city transit API, with a 2,000-download first month.

SKILLS
Frontend: React 18, TypeScript, Next.js, Vite, Tailwind CSS, Radix UI, Design Systems and Design Tokens, Accessibility (WCAG 2.1), Responsive Design; Testing: Playwright (E2E), Vitest, Testing Library

Backend & Cloud: Node.js, Express, PostgreSQL, Prisma, REST APIs, GraphQL, Docker, AWS (ECS, RDS), Vercel, GitHub Actions

Product & Collaboration: Discovery with designers and product managers, Agile delivery, Code review, Technical writing, Mentoring juniors

EDUCATION
BSc Computer Science, Universidade de Lisboa (2017-09 to 2020-07)

ADDITIONAL
Languages: Portuguese (Native), English (Fluent), Spanish (Conversational)
Work Authorization: EU citizen (Portugal), no sponsorship needed in the EU
